Dear Governor's Salmon Workgroup Members,

Let's be the generation that takes bold action to bring back the amazing salmon. I do not want to have to tell stories about these amazing species to my grandchildren, I want to be able to show them living examples of these fish. Let's do the right thing for these fish and us, let's breach the dams. In the long run it is the cheapest solution and the one that will be the most successful. Just think how exciting it will be as we chart the increasing populations of the salmon over time. Let's be the generation that will be known for bringing back the salmon, not the one that let them go extinct. We know what the best course of action is, let's do it!!

The status quo is not bringing back Idaho's fish.

Outfitters, guides, anglers, local businesses, and communities along our rivers are hurting because returns of salmon and steelhead are so low. Idaho utilities, irrigators, and farmers also pay a price. Ecosystems are hurting also.

I applaud the Governor's salmon workgroup for recently agreeing on goals for fish that aim for levels of healthy and harvestable abundance.

I agree that all factors -- habitat, harvests, hatcheries, and hydropower (dams) - need to be addressed in their policy recommendations to Gov. Little, which include ideas on how to make the Snake River safer for migrating fish.

I expect the workgroup to continue making progress in order to take bold action to find solutions for salmon and steelhead and Idaho communities.

I ask your workgroup to urge Gov. Little to embrace bold plans around saving Idaho's wild salmon and steelhead, building a new, green and affordable energy future for Idaho and the Northwest, and ensuring farmers continue to prosper as a result of new, regional investments in our collective future.

I am looking to Gov. Little and this workgroup to lead these ideas forward.

Regards, Burton Smith 2651 4000 N Twin Falls, ID 83301
